

ArgenIS Mission Statement

ArgenIS custom abutments are manufactured with one thing in mind: the patient. Argen's advanced engineering and state-of-the-art manufacturing produces precise, industry-leading tolerances between the implant and the abutment. Our FDA-cleared proprietary process ensures an optimal fit every time, providing customers with a quality solution for all implant restorations as well as complete peace of mind.

Argen's first priority is customer satisfaction, as demonstrated by our extensive warranty offering. Our dedicated team of engineers has implemented an intensive inspection process whereby critical features of abutments are measured on equipment with +/- 2 micron resolution.

As a manufacturer and milling center, Argen has the unique advantage of being able to design files that accurately match the specifications of the parts. These advantages allow us to provide optimal accuracy and to deliver a digital workflow that is unrivaled in the industry. We can implement a completely custom workflow based on your needs, from scan to model, design of the abutment, to the coping and crown. At Argen, we understand that dental laboratories are building a smile, not just an abutment. As a result, Argen will stand beside you wherever your implant needs may take you.
